INTEGRASYS introduces Satmotion for Google Glass at CommunicAsia 2014

Tuesday, June 17, 2014 ([0 Comments](#))

 [Share](#) |    

INTEGRASYS, World Leader VSAT Auto-Commissioning and Satellite Carrier Monitoring systems manufacturer announces the immediate release of Satmotion Pocket Remote Commissioning Solution for Google Glass, at CommunicAsia2014 tradeshow, Singapore.

As the first Google Glass App especially design for the Satellite Industry, Satmotion Pocket opens the door to final customer VSAT installation; and now with Google Glass both hands are free for antenna alignment purposes, allowing the installer to look at the critical line up parameters in the most extreme weather conditions.

The Satmotion Benefits are:

- *No more calls to the NOC*
- *No more Cross Pol (XPOL) interference*
- *Minimizing Adjacent Satellite Interference (ASI)*
- *Reduces human factor errors*

Featured Research

- *Most accurate measurements available in the field*
- *No more telephone connections required*
- *No more expensive Spectrum Analyzer in the field required*
- *Allows for simultaneous installers in different locations*
- *Maximum CW carrier power, automatic BUC compression point calculation*
- *VSAT Optimal performance*

Satmotion Pocket is the unique commissioning solution which allows an accurate and easy line up for multiple antennas and modems for deployment of large networks by saving time and resources.
