**INTEGRASYS is going to launch GeoBeam the Link Budget Calculation and Beam Designer at SATELLITE Show!**

**Madrid, , Spain - Wednesday, March 5th 2014 -**

INTEGRASYS is going to launch GeoBeam the Link Budget Calculation and Beam Designer at SATELLITE Show!

INTEGRASYS has announced that in the coming days GeoBeam will be launched at SATELLITE Show. GeoBeam is the Integrasys newest product from the Satellite product line, it allows to calculate the forward and return Link Budget fast, with an extreme accuracy, and very simple interface instead of current method using very complex excel calculations.

GeoBeam presents these calculations on very simple pdf reports with multitude diagrams which allow automatizing the customer reports.

This software allows designing Satellite Contours and Service Areas for reporting ITU. GeoBeam is fully compatible with ITU software such as GIMS. It also allows the Satellite Operator to analyze and calculate with the designed coverage contours before presenting them for ITU approval. This is an easy check which makes a big difference fulfilling the ITU requirements.

INTEGRASYS Building Success from Innovation
